## Solution

The solution is fully tradeable and transferable tokens, listed on a number of crypto exchanges with a quarterly reported inner gold value i.e. a stable and increasing gold floor. Jinbi tokens are held in the most secure Ethereum wallet, Pillar. When you own the physical asset, it holds no counterparty risk as it is under your personal control. The Jinbi token functions

as an independently verifiable and decentralized asset that empowers buyers to verify their gold acquisition throughout the supply chain. All acquisitions are run through a smart contract, that is digitally signed each step of the way. By utilizing cryptographic security, only those within the supply chain are allowed to view the details.

## Validation

Independent auditors will carry out quarterly audit inspections on the quantity and quality of gold stored in associate vaults to ensure proper and correct accounting is upheld, which is what the market demands.

## Market

The Physical Gold market is a multi-trillion dollar industry however, is still largely opaque, specialist and requires significant capital to invest. Jinbi Token holders will all participate from the profitability of

gold production at source in an environmentally friendly and responsible partnership. At Jinbi, we provide a blockchain based digital token that will transform this multi-trillion-dollar industry.

## Summary

The time has come for the synthesis of both gold and crypto currencies in the Jinbi Token. Backed by an audited and increasing physical gold floor, Jinbi Token holders will benefit directly and share in the profitability from the production of gold at source. Jinbi will create liquidity events following

production milestones whereby each coin holder will receive a biannual dividend payable in physical gold or Jinbi (JNB)Tokens. All other funds are reinvested back into Jinbi to continue further gold production.

## Problem

Buying 24 carat gold can be difficult and confusing. It is a well-known fact that you can buy gold with paper contracts, meaning that you could be subject to counterparty risk.

## Competitive Advantage

All participants get transparency into the supply chain and have a precise understanding as to the location of their gold. Jinbi makes it simple to buy gold, safely and with ease. Dividends will also be paid upon reaching significant production and storage milestones.

By utilizing smart contracts and linking it to gold, it makes it more exchangeable and a much more secure and trusted source of value. Transparency is what the industry needs and blockchain and the Jinbi Token is the solution to deliver it.

## ICO Schedule

Pre-Qualified May 2018 | Pre-ICO Sale 18<sup>th</sup> June | ICO Sale 28<sup>th</sup> June 2018

12.5m Tokens Total | 2.5m Tokens Management & Marketing | 1.25m Pre Sale | 8.75m Main Sale

Jinbi, bringing blockchain to the gold industry.
